

## State transfer

| Protocol     | Initialization    | Resource state        | C receives the state |
|--------------|-------------------|-----------------------|----------------------|
|              |                   |                       |                      |
| Requirements | g=0 components    | All parties connected | g=0 components       |
|              | Spin-s compatible |                       |                      |

## Entanglement distribution

|              | Initialization   | During disconnection | Final state               |
|--------------|--|----------------------|---------------------------|
| Protocol     |  |                      |                           |
| Requirements | <div>g=0 components</div> <div>All parties connected</div> |                      | <div>g=0 components</div> |
|              | Spin-s compatible  |                      |                           |
